CASA Certification Attestation

BaseCloud LLC

Introduction

Cacilian is a CREST Pentest certified, Security Services organization through its affiliate, Prescient Security LLC and a Google empaneled Third Party Assessor. Cacilian provides comprehensive information security solutions for Global 1000 companies, offering expertise in IT risk, identity management, and in-sourced security services. Our clients, spanning industries such as finance, insurance, media, manufacturing, retail, pharmaceuticals, and government, rely on us for a full range of services, including security architecture, policy design, vulnerability assessment, penetration testing, multi-framework audits, project management, and digital forensics.

Testing

Cacilian was engaged to provide a Tier 2 CASA (Cloud Application Security Assessment) Letter of Verification submitted to the App Defense Alliance and Google to serve as certification that the BaseCloud LLC Web Application meets the requirements of the CASA Framework. Information regarding framework specifics can be found here: <https://appdefensealliance.dev/casa/casa-requirements>

Conclusion

Cacilian's analysis is based on the state of the technologies as of [February 27, 2026] the date of final verification. The Validity of this Attestation for this assessment is for one year, starting [February 27, 2026, to February 27, 2027]

Cacilian makes no undertaking to supplement or update this report on the basis of changed circumstances or facts of which we become aware after the date of final testing, absent a specific written agreement to perform supplemental or updated analysis. Statements made in this attestation and accompanying report reflect conditions found at time of testing and are not to be projected beyond the date of delivery of this report. Projection of any Cacilian's conclusion beyond the date of this document is subject to risk that the validity of such conclusions may be altered as a result of a continually evolving threat landscape. As technologies and risks change, the vulnerabilities associated with the operation of systems described in this report and the actions necessary to reduce exposure to vulnerabilities for which we tested, will also change.
